Sciagen CRM: Sales Rep Training Guide

Practice scenarios for the iPad app and the Salesforce back office

Sandbox training edition · Version 3.1

1. How to use this guide

This guide walks you through the main things a rep does in Sciagen CRM. Each scenario is a short list of steps with the test data to use. Follow the steps in order, and sync before you start each scenario. If something does not look right, raise it through **Help & Support** (section 9) with a screenshot.

Screen names in this guide follow the app (for example *My Schedule*, *Scheduler*, *Help & Support*). Wording can differ slightly between versions. If a name does not match, look for the closest one.

This is a test sandbox. Use only the test records below. Never type real patient information.

2. Before you start

- iPad with the Sciagen CRM app, signed in with your own user, and your territory assigned.
- Access to the Salesforce sandbox to open the **Sciagen Reports** page.
- A **Business Admin** on standby. They approve your requests (Scenario 1) and unlock a frozen plan (Scenario 3).
- For the sampling call (Scenario 2): a sample lot in your stock and a doctor with a verified licence. If the app does not allow the sample, note the message it gives.

3. Who tests what, and your test data

Each person works in their own territory and uses the test set for that territory. Bengaluru and Delhi are each split into two territories (North and South), so each has its own set.

User	Email	Role	Territory	Test set
Avinash Gawali	avinash.gawali@dermapharm.com	Key Accounts Manager	Pune	1 (Pune)
Mukul Pathak	mukul.pathak@dermapharm.com	Key Accounts Manager	Delhi North	2 (Delhi North)
Aravind Kumar	arvind.kumar@dermapharm.com	Key Accounts Manager	Delhi South	3 (Delhi South)
Chayasmita Roy	chayasmita.roy@dermapharm.com	Key Accounts Manager	Bengaluru North	4 (Bengaluru North)

Madhusudan Siddaraju	madhusudan.siddaraju@dermapharm.com	Key Accounts Manager	Bengaluru South	5 (Bengaluru South)
Sandeep Dubey	sandeep.dubey@dermapharm.com	Key Accounts Manager	Mumbai	6 (Mumbai)
Kunal Ruhela	kunal.ruhela@dermapharm.com	Key Accounts Manager	Ahmedabad	7 (Ahmedabad)
Bala Prakash	bala.prakash@dermapharm.com	Key Accounts Manager	Chennai	8 (Chennai)
Ashu Sharma	ashu.sharma@dermapharm.com	Zonal Business Manager - North	Delhi (North and South)	none: reviews Delhi KAMs (Scenario 6)
Afroz Pasha	afroz.pasha@dermapharm.com	Zonal Business Manager - South	Bengaluru (North and South)	none: reviews Bengaluru KAMs (Scenario 6)

Trainer to confirm: the list shows only "Delhi" and "Bengaluru" for the KAMs. This guide assumes the North/South split above (Mukul Pathak: Delhi North, Aravind Kumar: Delhi South, Chayasmita Roy: Bengaluru North, Madhusudan Siddaraju: Bengaluru South). Change the table if it differs. Make sure each person has their territory assigned in the system before the session.

Use cases by user

Everyone does Scenarios 1 to 5 in their own territory with their own set. In addition, each KAM goes deeper on one area, so that between you all the call types, planning and consent are covered in every region. The Zonal Business Managers do Scenario 6.

User (territory)	Extra focus, using doctors from your own territory
Avinash Gawali (Pune)	Detailing with CLM, then a **group call** at your test hospital with 3 doctors. Check each doctor is credited once.
Mukul Pathak (Delhi North)	**Introductory** call to a doctor you have not met, then a **sampling** call with one sample drop.
Aravind Kumar (Delhi South)	**Follow-up** calls, and an **event** (Speaker Program) on the schedule. Confirm the event is not counted as a planned call.
Chayasmita Roy (Bengaluru North)	**Call Only** detailing, plus an **unplanned visit** from the call log. Compare how both appear in Reports.
Madhusudan Siddaraju (Bengaluru South)	**Visit** calls, then **reschedule** one and **cancel** one. Check the Missed Calls report afterwards.
Sandeep Dubey (Mumbai)	A **group call** followed by a **sampling** call. Note the sample message if it is refused.

Kunal Ruhela (Ahmedabad)	**Consent** for your test doctor with all four purposes, then an **approved email**. Check Consent Status and Approved Email in Reports.
Bala Prakash (Chennai)	The full **November plan** with V3, V2 and V1 doctors, **freeze**, then an **unlock request** and re-freeze (Scenario 3).

Test records (hospital first, then doctor)

Always create the hospital before the doctor. A doctor is linked to the hospital where they work, so the hospital must already exist (approved and synced) before you raise the doctor's request.

All names, e-mail addresses and phone numbers are **fictional**, for training only. Phone numbers are 10 digits, the format the system accepts. Test doctors and hospitals use only the two specialities in this training: **Pulmonology** and **Immunology**.

Set 1: Pune			
Step 1: create the hospital (HCO) first		**Step 2: then the doctor (HCP)**	
Name	Sahyadri Chest & Allergy Hospital	Name	Dr. Meera Kulkarni
Type	Hospital	Specialty	Pulmonology
Speciality	Pulmonology	HCP type	Physician
Address	14, Deccan Gymkhana	Degree	MBBS, MD (Pulmonary Medicine)
City / state	Pune / Maharashtra	Email	meera.kulkarni@example.com
Pincode	411004	Phone	9000010001
Phone	9000010011	Works at	Sahyadri Chest & Allergy Hospital
		Later change	phone 9000010002, email dr.meera.kulkarni@example.com

Set 2: Delhi North			
Step 1: create the hospital (HCO) first		**Step 2: then the doctor (HCP)**	
Name	Civil Lines Chest & Respiratory Hospital	Name	Dr. Vikram Malhotra
Type	Hospital	Specialty	Pulmonology
Speciality	Pulmonology	HCP type	Consultant
Address	9, Rajpur Road, Civil Lines	Degree	MBBS, DNB (Respiratory Medicine)
City / state	New Delhi / Delhi	Email	vikram.malhotra@example.com
Pincode	110054	Phone	9000020001
Phone	9000020011	Works at	Civil Lines Chest & Respiratory Hospital
		Later change	phone 9000020002, email dr.vikram.malhotra@example.com

Set 3: Delhi South

Step 1: create the hospital (HCO) first		Step 2: then the doctor (HCP)	
Name	South Delhi Allergy & Immunology Centre	Name	Dr. Neha Bhatia
Type	Clinic	Specialty	Immunology
Speciality	Immunology	HCP type	Specialist
Address	31, Greater Kailash II	Degree	MBBS, MD (Immunology)
City / state	New Delhi / Delhi	Email	neha.bhatia@example.com
Pincode	110048	Phone	9000030001
Phone	9000030011	Works at	South Delhi Allergy & Immunology Centre
		Later change	phone 9000030002, email dr.neha.bhatia@example.com

Set 4: Bengaluru North			
Step 1: create the hospital (HCO) first		**Step 2: then the doctor (HCP)**	
Name	Hebbal Lung & Allergy Hospital	Name	Dr. Ramesh Gowda
Type	Hospital	Specialty	Pulmonology
Speciality	Pulmonology	HCP type	Consultant
Address	22, Bellary Road, Hebbal	Degree	MBBS, MD (Chest Diseases)
City / state	Bengaluru / Karnataka	Email	ramesh.gowda@example.com
Pincode	560024	Phone	9000040001
Phone	9000040011	Works at	Hebbal Lung & Allergy Hospital
		Later change	phone 9000040002, email dr.ramesh.gowda@example.com

Set 5: Bengaluru South			
Step 1: create the hospital (HCO) first		**Step 2: then the doctor (HCP)**	
Name	Jayanagar Immunology & Asthma Clinic	Name	Dr. Divya Hegde
Type	Clinic	Specialty	Immunology
Speciality	Immunology	HCP type	Physician
Address	18, 4th Block, Jayanagar	Degree	MBBS, MD (Immunology)
City / state	Bengaluru / Karnataka	Email	divya.hegde@example.com
Pincode	560011	Phone	9000050001
Phone	9000050011	Works at	Jayanagar Immunology & Asthma Clinic
		Later change	phone 9000050002, email dr.divya.hegde@example.com

Set 6: Mumbai			
Step 1: create the hospital (HCO) first		**Step 2: then the doctor (HCP)**	
Name	Andheri Respiratory Care Hospital	Name	Dr. Farhan Ansari
Type	Hospital	Specialty	Pulmonology
Speciality	Pulmonology	HCP type	Specialist
Address	55, SV Road, Andheri West	Degree	MBBS, MD (Pulmonary Medicine)
City / state	Mumbai / Maharashtra	Email	farhan.ansari@example.com
Pincode	400058	Phone	9000060001
Phone	9000060011	Works at	Andheri Respiratory Care Hospital
		Later change	phone 9000060002, email dr.farhan.ansari@example.com

Set 7: Ahmedabad			
Step 1: create the hospital (HCO) first		**Step 2: then the doctor (HCP)**	
Name	Navrangpura Allergy & Immunology Hospital	Name	Dr. Hiral Shah
Type	Hospital	Specialty	Immunology
Speciality	Immunology	HCP type	Physician
Address	7, CG Road, Navrangpura	Degree	MBBS, MD (Immunology)
City / state	Ahmedabad / Gujarat	Email	hiral.shah@example.com
Pincode	380009	Phone	9000070001
Phone	9000070011	Works at	Navrangpura Allergy & Immunology Hospital
		Later change	phone 9000070002, email dr.hiral.shah@example.com

Set 8: Chennai			
Step 1: create the hospital (HCO) first		**Step 2: then the doctor (HCP)**	
Name	T Nagar Chest & Sleep Hospital	Name	Dr. Arvind Subramanian
Type	Hospital	Specialty	Pulmonology
Speciality	Pulmonology	HCP type	Consultant
Address	41, Usman Road, T Nagar	Degree	MBBS, DNB (Respiratory Medicine)
City / state	Chennai / Tamil Nadu	Email	arvind.subramanian@example.com
Pincode	600017	Phone	9000080001
Phone	9000080011	Works at	T Nagar Chest & Sleep Hospital
		Later change	phone 9000080002, email dr.arvind.subramanian@example.com

Type the specialty, HCP type and hospital type exactly as shown. They are the values the system recognises; anything else is left blank on the new record and the Business Admin has to fill it in. In the steps, **"your hospital"** and **"your doctor"** mean the two records of your set.

For the other scenarios you also use **existing doctors from your own territory list**.

4. Scenario 1: Add a hospital and a doctor (data change requests)

Reps cannot create or edit hospitals and doctors directly. You send a request, a Business Admin approves it, and the record appears on the next sync.

Part A: the hospital (HCO)

1. Sync, open *Accounts* and search for your hospital's name. It should not exist yet.
2. Create a **New HCO** request. Enter the hospital details from your set: name, type, speciality, address, city, state, pincode and phone. Attach the proof photo if the form asks for one, then submit.
3. The request is now **Pending**. Tell your Business Admin it is waiting.
4. **Business Admin:** in Salesforce open the **DCR Review** tab, open the request, check the details against the set and set the status to **Approved**.
5. Sync the iPad again and search for the hospital. It now appears in *Accounts*.

Part B: the doctor (HCP)

1. Only start after the hospital is on your iPad.
2. Create a **New HCP** request with the doctor details from your set: name, specialty, HCP type, degree, email and phone. Choose your hospital as the place the doctor works, then submit.
3. **Business Admin:** approve the request in **DCR Review**.
4. Sync. Open the doctor and check the details, the territory and the hospital link.

Part C: change and reject

1. Create an **Edit HCP** request on your doctor. Change the phone and email to the "later change" values in your set. The Business Admin approves it. After sync the doctor shows the new phone and email.
2. Create a second **Edit HCP** request that changes the specialty to Oncology. This time the Business Admin **rejects** it and writes a reason. You see the rejection and the reason, and the specialty stays as it was.
3. Try to create your hospital again as a new request (same name, city and phone). The Business Admin treats it as a duplicate and does not create a second record.

> In a doctor's or hospital's detail screen you cannot change name, phone or address directly. All changes go through a request.

5. Scenario 2: Schedule every type of call

Use your doctor from Scenario 1 and other doctors from your list. Schedule the calls below for days **this week**. Sync after each block and check that the same schedule shows in the iPad and in Salesforce *My Schedule*.

#	Call to schedule	Guide
1	**Detailing**, category **Call with CLM**	Use your doctor. Choose one of your products. The call shows the CLM tag.
2	**Detailing**, category **Call Only**	Same as above but without a presentation.
3	**Introductory**	Choose a doctor you have not called before.
4	**Follow-up**	Choose a doctor you called earlier.
5	**Sampling**	Add one sample drop with a small quantity. If it is refused, note the reason shown.
6	**Visit**	A courtesy visit without detailing.
7	**Group call**	Choose a hospital and add 3 doctors as attendees. One call is created and each doctor is credited with it once.
8	Different **activity types**	On three calls choose In-person, Phone and Video.
9	**Event**	Add a Speaker Program or Conference. Events are not counted as planned calls in Reports.
10	**Unplanned visit**	Log a visit you did not plan, from the call log. It counts as completed once submitted, and is not a planned call.
11	**Reschedule** and **cancel**	Move one planned call to another day. Cancel another one.

Complete, save and submit

1. Open the Detailing call with CLM. Fill the call report and key messages and **Save**. A saved report can still be edited.
2. Open it again and **Submit**. A submitted report is locked and cannot be deleted.
3. Leave one call **saved but not submitted** (a draft). You use it in Scenario 4.
4. Leave one planned call for **yesterday** with no call report. You use it in Scenario 4 as a missed call.

Need a submitted call changed? Raise a *Help & Support* request with the category **Unlock Submitted Call** and pick the call. A Business Admin can unlock it so you can correct and submit it again.

6. Scenario 3: Plan November and freeze the schedule

Build the whole month of November in the *Scheduler* according to how often each doctor must be visited, then freeze it.

Planning guide for this training

Each doctor has a **classification** (V1, V2 or V3) in the doctor's *Segmentation*. A higher class is visited more often.

Classification	Meaning	Calls to plan in November
V3	Highest priority	3 calls (about one every 10 days)
V2	Medium priority	2 calls (about every 2 weeks)
V1	Lower priority	1 call
Unclassified	Not yet classified	Do not plan until classified; tell your trainer

Trainer to confirm: the call counts above are the planning guide for this training. Replace them with your company's approved visit frequency if it differs.

1. Open *My Schedule* → *Scheduler* and go to **November**.
2. Filter your doctors by classification V3, then V2, then V1, and write the totals in the worksheet.
3. Work out the calls you must plan: V3 doctors × 3, plus V2 doctors × 2, plus V1 doctors × 1.
4. Plan the calls across working days. Skip Sundays and holidays and keep each day realistic.
5. Check that every V3 doctor has 3 calls, every V2 doctor 2 and every V1 doctor 1, and that the totals match the worksheet.
6. **Freeze** the plan. The frozen plan becomes the month's baseline.
7. After the freeze add one new call, move one call to another day and cancel one. Each change is recorded against the frozen plan (*Added after freeze*, *Rescheduled*, *Cancelled*).
8. Try to change a doctor's V-class while the plan is frozen. Depending on the setting, segmentation may be locked for the month. Note what you see.
9. To change the plan itself, raise a *Help & Support* request with the category **Unlock Monthly Plan** and say why.
10. **Business Admin:** open the request in the **Support Console** and click **Unlock this plan**. Enter a reason and confirm. The plan returns to Draft and the rep gets a reply.
11. Make your change and **freeze again**. The request closes by itself.

Class	Doctors	Calls per doctor	Calls to plan	Calls planned on screen
V3		3		
V2		2		
V1		1		
Total				

7. Scenario 4: Compare your reports

The iPad *Reports* and the Salesforce **Sciagen Reports** page are built to give the same numbers, based on the calls you made in Scenario 2. Sync before you compare.

How the numbers are counted

Term	Rule
Planned	Planned calls in the period. Events, call-log entries and cancelled plans are not counted.
Completed	Call reports that are Submitted. A group call counts once for each doctor who attended.
Draft	Call reports saved but not submitted. They never count as completed.
Missed	A plan still marked Planned, dated before today, with no call report (draft or submitted).
Covered	A doctor with at least one completed call. Coverage % = covered doctors ÷ doctors × 100, never above 100.
Achievement %	Completed ÷ planned × 100. It can go above 100 (5 done on 4 planned is 125%).
Segment	The doctor's classification: V3 (visited most often), V2 or V1. A doctor with no classification is shown as Unclassified.

1. From your own notes of Scenario 2, fill the "My count" column of the table below.
2. On the iPad open *Reports* → *Performance Overview* for **This Week** and write the values in the iPad column.
3. In Salesforce open **Sciagen Reports** → **Performance Overview** for the same period and fill the Salesforce column.
4. Open **Missed Calls**. Find the plan you left without a report. The draft call is not listed there, because a draft counts as done.
5. Open **Call Coverage** and group by Segment, then by Specialty. Check that the groups add up to the totals on Performance Overview.
6. Open **Call Frequency** and **Segment Analysis** and compare planned and calls per doctor with your plan from Scenario 3.
7. Change the period to **Last Month** and add a **V3** filter. Everything changes together. Use **Export CSV** on a table to get the same rows as on screen.
8. Click a row (for example a segment, then a doctor) to see the doctors, calls, plans and emails behind a number.
9. Submit your draft call, sync, press **Refresh** in Reports and see Completed go up by one and Drafts down by one.
10. **Managers and Business Admins:** in Sciagen Reports pick a **Territory**, then a **KAM** to see that KAM's reports. A KAM only ever sees their own.

Measure (This Week)	My count	iPad	Salesforce
Planned calls			
Completed calls			
Drafts to submit			
Missed			

Doctors covered			
Coverage %			
Call achievement %			

Good to know: CLM engagement shows 0 in Salesforce because presentation sessions are not synced yet. Sales and Samples reports stay empty until sales data is loaded. If a figure differs by a day, check your time zone and that you synced first.

8. Scenario 5: Capture consent

Consent records that the doctor agrees to be contacted, and to receive samples. It is captured on the iPad and signed by the doctor.

1. Open your doctor (Scenario 1) and look at *Consent*. With no consent yet, the status is **Pending**.
2. Start **Capture consent** and choose the purposes: **Email**, **Mobile**, **WhatsApp** and **Sample opt-in**. Each can be switched on separately.
3. Enter your doctor's phone number from your set as the mobile and WhatsApp number. Verify the numbers if the app asks for a code.
4. Let the doctor sign on the iPad and save. The consent is stored with the signature, the signer's name, and the date and time.
5. Sync and open the doctor again. The status is now **Captured**.
6. Open *Reports* → *Consent Status* on the iPad and in Salesforce. Captured % and the counts now include your doctor, and the "Consents captured" chart shows the month.
7. Send an **approved email** to the doctor. After sync, open *Approved Email* in Reports to see sent, delivered, failed and queued.
8. Pick a doctor who has **no consent** and try to send an approved email or give a sample. Note what the app does. In reports a doctor with no consent counts as Pending.
9. **Trainer demo:** a consent older than **3 years** shows as **Expired**, even if it was signed. Expired doctors appear under "Consent pending or expired" and need a new consent.

9. Scenario 6: Zonal Business Managers review their KAMs

This scenario is for **Ashu Sharma** (North) and **Afroz Pasha** (South). Do it after the KAMs have finished Scenarios 1 to 5. KAMs only ever see their own reports; managers can look at their team.

1. Open **Sciagen Reports** in Salesforce. Besides the period picker you see a **Territory** list and a **KAM** list.
2. Open the Territory list. It shows your territories, with the child territories (North and South) indented under them. You cannot pick a territory outside your zone.
3. Pick one territory, for example **Delhi North** (or **Bengaluru North**). The KAM list now shows only the KAMs in that territory.
4. Look at **Performance Overview** for the territory. This is the team view: all doctors in that territory.
5. Pick a **KAM**. The reports now show only that KAM's doctors and calls. Compare the numbers with what that KAM sees in their own Reports.
6. Open **Missed Calls**, **Call Coverage** and **Consent Status** for the KAM and click through to a doctor.
7. Switch to the other territory (for example **Delhi South**) and the other KAM, and compare the two territories.
8. Change the period to **This Week** and **Last Month** and check that the numbers change together.

> Ashu Sharma covers the Delhi territories and the Delhi KAMs. Afroz Pasha covers the Bengaluru territories and the Bengaluru KAMs. Each only sees the territories assigned to them.

10. A full day, and where to get help

Practice day: sync in the morning and check today's schedule, do two planned calls and submit them, capture consent for one doctor, then sync and compare the day's numbers on the iPad and in Salesforce Reports.

If something goes wrong: note the step, what you did and the exact message. Raise a **Help & Support** request (category *App Issue*, *Sync Problem* or *Data Correction*) and attach a screenshot.

Rep name: _____ Territory: _____ Set (1 to 8): _____ Date: _____
